

The Burden of Diabetes in Iowa

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 37 million Americans have diabetes and face its devastating consequences. What's true nationwide is also true in Iowa.

Iowa's diabetes epidemic:

- Approximately **248,315 people in Iowa**, or 10.1% of the adult population, **have diagnosed diabetes**.
- An additional **70,000 people in Iowa have diabetes but don't know it**, greatly increasing their health risk.
- There are **820,000 people in Iowa**, 34.1% of the adult population, who have **prediabetes** with blood glucose levels that are higher than normal but not yet high enough to be diagnosed as diabetes.
- **Every year** an estimated **18,883 people in Iowa** are diagnosed with diabetes.

Diagnosed diabetes costs an estimated \$2.6 billion in Iowa each year.

The serious complications include heart disease, stroke, amputation, end-stage kidney disease, blindness—and death.

Diabetes is expensive:

People with diabetes have **medical expenses approximately 2.3 times higher** than those who do not have diabetes.

- Total **direct medical expenses** for diagnosed diabetes in Iowa were estimated at **\$2 billion in 2017**.
- In addition, another **\$646 million** was spent on **indirect costs** from lost productivity due to diabetes.

Improving lives, preventing diabetes and finding a cure:

In 2023, the **National Institute of Diabetes and Digestive and Kidney Diseases** at the National Institutes of Health invested **\$2,231,215** in diabetes-related research projects in Iowa.

The **Division of Diabetes Translation** at the CDC provided **\$1,109,067** in diabetes prevention and educational grants in Iowa in 2021.
